

SOPRASSUB EK 900

(code: 806982)
LED DIVE TORCH 900 lm

Specifications

Bulb Type:	10 watts LED Torch,#U2 bulb.
Brightness:	900 lm
Waterproof up to:	100 m (330 ft)
Color temperature:	7000 K
Beam angle:	10°
Battery:	3x C alkaline battery
Run Time:	160 min (100%)
Depth Rating:	150 m (450ft)
Size:	210 mm x 42 mm
Material:	aluminum alloy
Switch Mode:	twist on type

Care and Maintenance

Batteries

Use only alkaline batteries which are installed in an o-ring sealed light without observing the proper polarity, type, brand name or age can vent hydrogen gas and possibly cause an explosion. To avoid these situations, always load battery case by inserting "+" polar into the canister. Do not mix batteries of different type, brand name or age. Discard all batteries as soon as they are drained or no longer produce light. Remove batteries from the torch if they are not in use for 1 month.

O-rings

Check the main o-ring seal before diving, make sure that no salt, sand, hair, contaminant or distortion is found. To lubricate o-rings, grease them by running it between your fingers after applying a little o-ring grease. Only shine the o-ring with grease, excesses of grease are not necessary and do not improve the seal. To close the torch, place the end cap and screw smoothly, a snug twist is all that is required.

Clean & storage

After use, rinse your torch in fresh water to remove any salt water, mud or other potentially damaging contaminants and then dried before storage. Always store batteries in dry, cool and dark areas (less than 25°C).

Caution

Do not dismantle the lamp head. Every dive torch is waterproof tested before leaving the factory and the attempt to remove lamp head could make the torch to flood, which will make warranty invalid.

Handle with care during transportation.

...and have fun!
